# 2 Before Repair

- 1.Turn off the power supply. Using a  $10\Omega$ , 10W resistor, connect both ends of power supply capacitors (C571 - 574, 558) in order to discharge the voltage.
- 2.Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed

current at 50Hz in NO SIGNAL mode should be shown below with respect to supply voltage 230/230-240V.

Power supply voltage	AC230V, 50Hz	AC230 - 240V, 50Hz
Consumed current	Less than 250mA	Less than 250mA

# 3 Protection Circuitry

The protection circuitry may have operated if either of the following conditions are noticed:

- No sound is heard when the power is switched ON.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlined below:

1. Switch OFF the power.
2. Determine the cause of the problem and correct it.
3. Switch ON the power once again.

#### Note:

When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and ON again.

## 4 Handling Precautions for Traverse Deck

The laser diodes in the traverse deck (optical pickup) may break down due to potential difference caused by static electricity of clothes or human body.  
So, be careful of electrostatic breakdown during repair of the traverse deck (optical pickup).

### 4.1. Handling the traverse deck (optical pickup)

1. The traverse deck (optical pickup) is an extremely high-precision construction and must not be subjected to impact, excessive vibration, or other types of rough handling.
2. In order to prevent static electricity damage to the laser diode, use a short pin or similar tool to short the optical pickup's flexible circuit boards after they have been disconnected from the main circuit board.
3. Handle the flexible circuit boards with care; excessive force could cause them to be broken.
4. Do not turn the pre-set variable resistor (for adjustment of the laser power); it has been adjusted at the factory. (as shown in Fig.1)

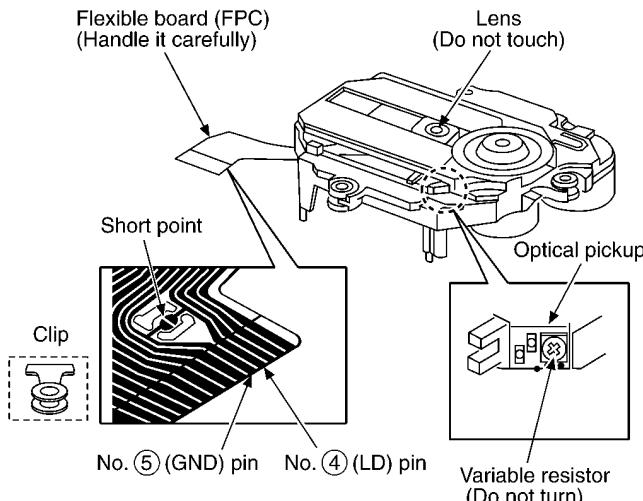

Fig.1

### 4.2. Grounding for electrostatic breakdown prevention

1. Human body grounding  
Use the anti-static wrist strap to discharge the static electricity from your body.
2. Work table grounding  
Put a conductive material (sheet) or steel sheet on the area where the optical pickup is placed, and ground the sheet. (as shown in Fig.2)

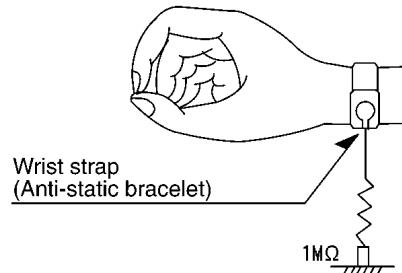

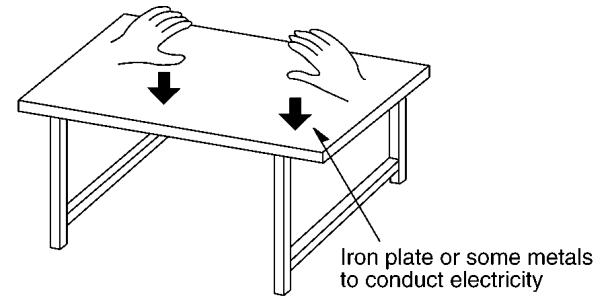

Wrist strap  
(Anti-static bracelet) $1M\Omega$ 

Fig.2

#### Caution:

The static electricity of your clothes will not be grounded through the wrist strap.  
So, take care not to let your clothes touch the traverse deck (optical pickup).

### 4.3. Caution when Replacing the Traverse Deck

The traverse deck has a short point shorted with solder protect the laser diode against electrostatic breakdown. Be sure to remove the solder from the short point before making connections.

#### CAUTION:

THIS PRODUCT UTILIZES A LASER. USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

## 5 Precaution of Laser Diode

**CAUTION:** This product utilizes a laser diode with the unit turned "on", invisible laser radiation is emitted from the pick up lens.

Wave length: 780 nm

Maximum output radiation power from pick up: 100 µW/VDE

Laser radiation from the pick up unit is safety level, but be sure the followings:

1. Do not disassemble the pick up unit, since radiation from exposed laser diode is dangerous.
2. Do not adjust the variable resistor on the pick up unit. It was already adjusted.
3. Do not look at the focus lens using optical instruments.
4. Recommend not to look at pick up lens for a long time.

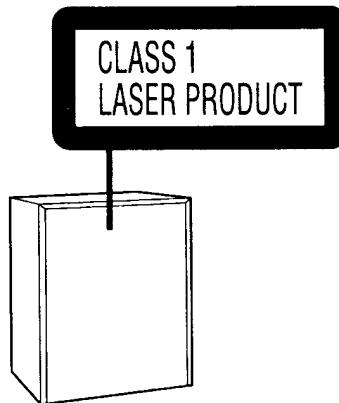

**ACHTUNG:** Dieses produkt enthält eine laserdiode. Im eingeschalteten zustand wird unsichtbare laserstrahlung von der lasereinheit adgestrahlt.

Wellenlänge: 780 nm

Maximale strahlungsleistung der laserinhalt: 100 µW/VDE

# 1 Connection of the Speaker Cables

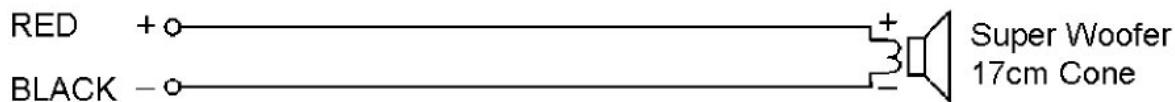

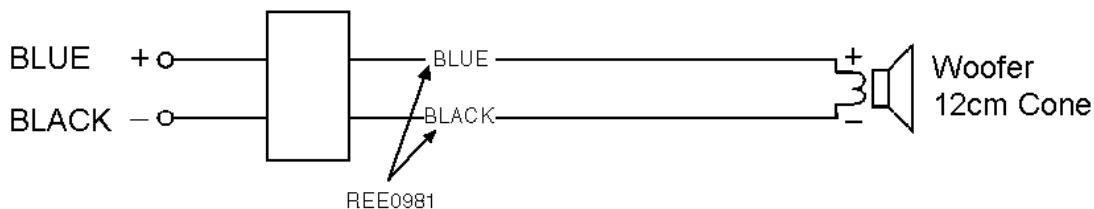

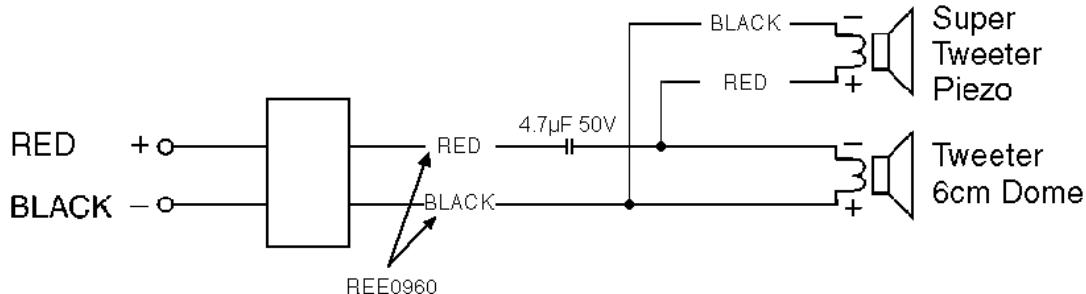

- Be sure to connect speaker cables before connecting the AC power supply cord.
  - The load impedance of any speaker used with this unit must be  $6\Omega$ .
  - Be sure to connect the cable from the right speaker to the right terminal and the cable from the left speaker to the left terminal.
1. Strip off the outer covering, and twist the center conductor. Make sure the bare ends of the wires are not unravelled. (If they are, twist them together again.)
  2. Insert the wire to the rear panel of the unit and close the lever.

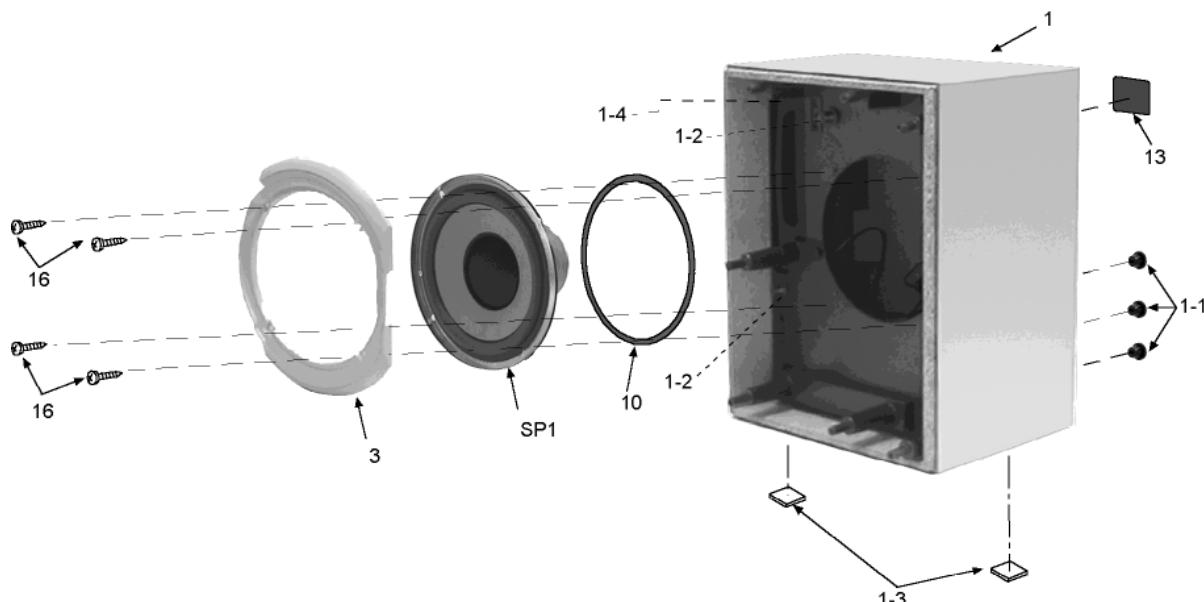

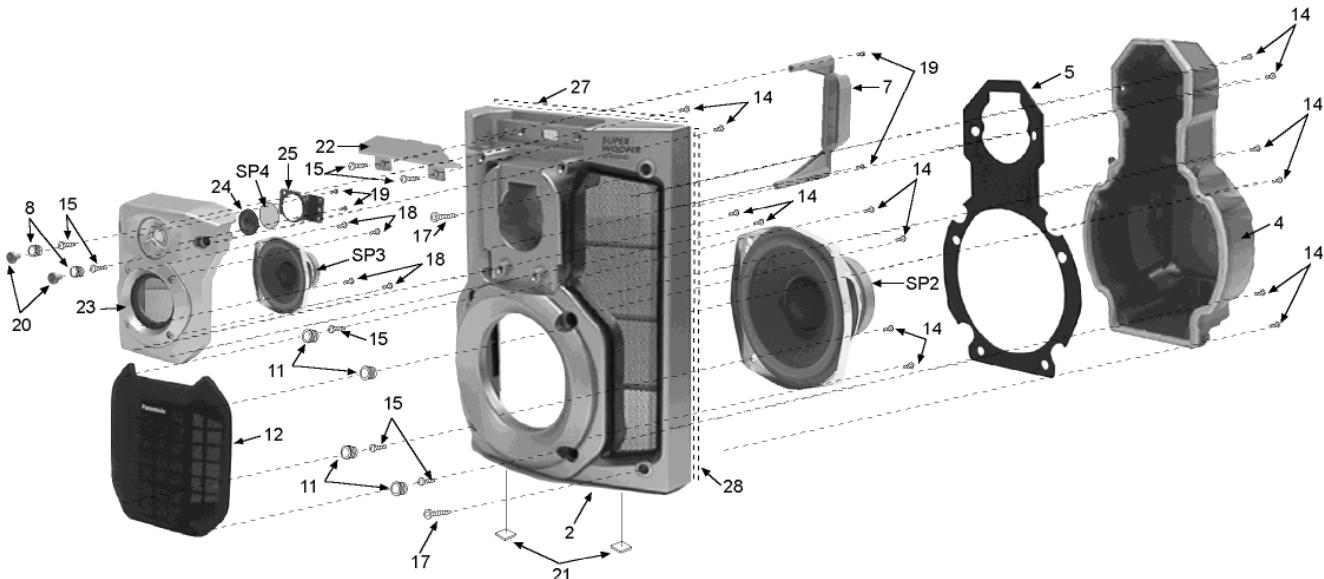

Notes :

- To prevent damage to circuitry, never short-circuit positive (+) and negative (-) speaker wires.
